

Lawn Play Curator 18-2-8

Traces + Organic Acid Complex

- Organic Acid Complex:
 - ensures maximum plant uptake of nutrients
 - mitigates the leaching of nutrients in the soil ie nutrients remain in the root zone longer
 - enhanced soil health and performance
 - Macro nutrients (NPK) are complimented with a trace mineral package
-

TECHNOLOGY

Lawn Play Curator 18-2-8 fertiliser is a complete blended liquid fertiliser with a full range of macro and the micro nutrients to support it.

At Lawn Play we believe in creating professional formulations and this is no different. When we created this one we didn't just stop at creating a product with comple NPK designed for turf growth but we also added micro nutrients as well.

With all that you could be thinking it's a complete product, and it is from a nutrient perspective but we went further and added an organic acid complex (OAC). This OAC helps to turn the nutrients into plant available forms, as well as helping to prevent the leaching of nutrients.

Lastly, because it's so popular and because our lawns are always under stress from play, drought, flood, disease etc. we felt it good to add some extra seaweed.

It was all then stabilised at the right pH and into forms that are easily absorbed through the leaf of the plant.

USE PATTERNS

Apply Lawn Play Curator 18-2-8 throughout the growing period as a maintenance fertiliser.

Apply Lawn Play Curator at 200 - 500ml/ 100 m².
